DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claims and disclosure are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors. For instance, claim 1 recites "a selection switch 9 switching to AUTO mode or SEMI/AUTO mode for a braking mode by having an AUTO mode terminal 9a automatically controlling a main brake and a parking brake and a SEMI/AUTO mode terminal 9b actuating the main brake during traveling or the parking brake upon the status of KEY-OFF." It is not clear how the selection switch operates, nor is it clear what is encompassed by the terminal actuating the main brake. Also note page 5 of the disclosure states, "main brake is operated during traveling, whereas the parking brake is operated by the main brake without operating the parking brake in the status of stopping (that is, at speed of 0 km/hour)." It is not clear how the parking brake is operated without operating the parking brake is operated

Application/Control Number: 10/523,433

Art Unit: 3683

clear how the driver selects terminals as required by claim 1. This list is merely exemplary. Art has been applied as best understood.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Wise et al (US# 4446950).

Wise et al discloses all the limitations of the instant claims (as best understood) including; a selection switch 84 switching to AUTO (operational) mode or SEMI/AUTO (anti-theft) mode for a braking mode by having an AUTO mode terminal 9a automatically controlling a main brake and a parking brake and a SEMI/AUTO mode terminal 9b actuating the main brake during traveling or the parking brake upon the status of KEY-OFF; a solenoid check valve 22/41 installed between an oil outlet of the brake master cylinder 15 and the oil pipe 17, having a plus electrode thereof connected to a plus electrode of a battery by being connected to a relay proximity switch, and actuated by an ON/OFF type control of relay 4; a relay 200 controlled by a stop sensing sensor by way of ON/OFF according to whether or not a proximity switch 69 installed in a accelerate pedal and a proximity switch installed in a brake pedal 12 contact and a detect signal from a speed sensor 50 sensing the speed of the automobile; and a stop

Art Unit: 3683

sensing sensor circuit connected in series to a proximity switch installed in a brake pedal by connecting in series an AUTO mode terminal of the selection switch connected to an output terminal of KEY switch with the proximity switch connected to a power source of the relay and connecting in parallel SEMI/AUTO mode terminal with the stop sensing sensor output terminal; according to a driver's selection of AUTO mode terminal or SEMI/AUTO mode terminal from the selection switch, the relay controlled by the stop sensing sensor, the proximity switch and the proximity switch controlling the solenoid check valve 22/41 installed between the oil pipe 15 and the oil inlet of the brake master cylinder 15 by way of free flow or control flow; whereby, upon stepping on a brake pedal, the main brake being operated during traveling, whereas the parking brake being operated by the main brake without operating the parking brake-in the status of stopping.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ono, Warner, and Deitchman et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradley T. King whose telephone number is (571) 272-7117. The examiner can normally be reached on 11:00-7:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James McClellan can be reached on (571) 272-6786. The fax phone
